PROFILE

Law student and self-taught software engineer with a sustained independent research programme in philosophy, political theory, and AI governance. Focused on how institutional, technical, and normative systems relate, and what holistic governance frameworks for advanced AI might look like. Brings an unusual combination of legal training, civic technology development, philosophical inquiry, and hands-on experience at an AI health-tech startup to questions about the alignment and regulation of AI systems.

EDUCATION

Strathmore University, Nairobi

Expected 2026

LLB (Bachelor of Laws)

Interdisciplinary self-study in philosophy of mind, political theory, and AI governance alongside formal legal curriculum.

TECHNICAL TRAINING

Software Engineering — Back-End Web Development — Distinction (Capstone Project) Completed April 2025

ALX | Mastercard Foundation

Cybersecurity — Distinction

Completed January 2026

ALX | Mastercard Foundation

Professional Foundations

Completed September 2024

ALX | Mastercard Foundation

Seminar on AI Governance and Global Catastrophic Risk

2025

ILINA (Institute for Longtermism in Africa)

Effective Altruism Introductory Programme — Certificate

2022

EXPERIENCE

Voxxil Technologies

December 2024 – February 2026

Administrative Officer

- Supported operations at Guyana’s startup medical technology company, which develops AI-powered Radiology Information Systems (RIS) for hospitals across the Caribbean and Latin America.
- Gained direct exposure to AI product development cycles, clinical data workflows, and the regulatory intersection of healthcare and emerging technology, including data protection frameworks.

Salang Water

February 2024 – August 2024

Technical Officer (now Shareholder)

- Managed technical operations for a water distribution company. Developed software to automate supply chain logistics, staff management, and billing processes.
- Retain a shareholder interest; transitioned to a non-executive capacity.

PROJECTS

Constituent Feedback Application

2024

Fullstack civic technology application designed to strengthen feedback loops between Kenyan citizens and their elected representatives, mapped to the country's political geography and voting regions. Built in Python and JavaScript as the ALX Software Engineering capstone project, for which it received a Distinction. The demo is live at onserioogeto.org.

RESEARCH INTERESTS

AI alignment and governance; constitutive (as opposed to regulative) approaches to normativity in multi-agent AI systems; practice-based frameworks for AI safety drawing on Spinoza, Aristotelian virtue ethics, and constitutional theory; the relationship between philosophy of mind and computational approaches to agency; civic technology and democratic participation. I am also deeply interested in philosophies of Art-as-a-form-of-distinct-knowledge.

SKILLS

Technical: Python, JavaScript, C, SQL; full-stack web development; cybersecurity fundamentals

Other: Legal research and drafting; trained in sculpturing and ceramics, music, photography; UX/application design.
